

# OPTIONAL KIT

## DF10 NWA kit

**MACHINE TYPE:** DF10

**REFERENCE CODE:** DF10.034 – DF10.035

### Description

The high speed filter rod maker DF10 can be equipped with the NWA (Non-Wrapped Acetate) filter rod production kit. The DF10 nominal production speed for NWA products is 500 m/min and, in case of tube filter production, is reduced to 400 m/min (or 4,800 rods per minute).

The DF10 NWA features the same size change flexibility of the standard DF10.

The machine can be predisposed for the production of both standard acetate and non-wrapped acetate filter rods with a conversion time lower than 4 hours.

The NWA filter rod production is based on the application of steam during the forming process. The machine connection to the centralized steam feeding system is standard, as an option it can be equipped with an independent steam generator.

### Advantages

- Just one high speed machine for both standard acetate and NWA filter rods
- Reduced impact on machine footprint
- Possibility to check the single NWA filter rod quality with on-line vision system
