

## First Replacement Kit

Obsolescence is the unwelcome consequence of Technology Evolution and its underestimation can have a major impact on your business.

If form-fit-function replacement parts are not available, re-engineering and re-qualification are required to successfully integrate new parts replacing the obsolete ones.

First Replacement Kit (FRK) is the smart solution G.D proposes in order to replace obsolete components, ensuring machine modernization and minimizing machine stops and their potential high cost.

The kit includes the new component replacing the obsolete one and also other parts required for the main component fitting. The kit also increases the group performances and update the machine technological level. After the first replacement, the single spare parts will be available via G.D Spare Parts Web Shop.
